SAFETY AND EMC INSTRUCTIONS

This manual contains important safety instructions. Please read and follow all instructions carefully during installation and operation of the unit. Read this manual thoroughly before attempting to unpack, install, or operate your Emergency Power System (EPS).

CAUTION! To prevent the risk of fire or electric shock, install in a temperature and humidity controlled indoor area free of conductive contaminants. (Please see specifications for acceptable temperature and humidity range).

CAUTION! To reduce the risk of electric shock, do not remove the cover.

CAUTION! EPS must be connected to an AC power outlet with circuit breaker protection. Do not plug into an outlet that is not grounded. If you need to de-energize this equipment, turn off and unplug the unit.

CAUTION! To avoid electrical shock, turn off the unit and unplug it from the AC power source before servicing EPS, replacing the external battery or installing equipment.

CAUTION! To reduce the risk of fire, only connect the EPS to a circuit with 40 amperes (CPS3500PIE/CPS3500PRO/CPS3500STD & CPS5000PIE/CPS5000PRO/CPS5000STD Series) maximum branch circuit over-current protection in accordance with the CE requirement.

CAUTION! The building wiring socket outlet (shockproof socket outlet) must be easily accessible and close to the EPS.

CAUTION! Please use only VDE-tested, CE-marked mains cable (e.g. the mains cable of your equipment) to connect the EPS to the building wiring socket outlet (shockproof socket outlet).

CAUTION! Please use only VDE-tested, CE-marked power cables to connect the loads to the EPS.

CAUTION! When installing the equipment, ensure that the sum of the leakage current of the EPS and the connected equipment does not exceed 3.5mA.

CAUTION! This is permanently connected equipment and only qualified maintenance personnel may carry out installations.

CAUTION! Do not disconnect the mains cable on the EPS or the building wiring socket outlet (shockproof socket outlet) during operations since this would remove the protective ground of the EPS and of all connected loads.

CAUTION! THE EPS shall be connected to the emergency switching device.
DO NOT USE FOR MEDICAL OR LIFE SUPPORT EQUIPMENT!
DO NOT use in any circumstance that would affect operation or safety of any life support equipment or with any medical applications or patient care.

DO NOT USE WITH OR NEAR AQUARIUMS! To reduce the risk of fire or electric shock, do not use with or near an aquarium. Condensation from the aquarium can cause the unit to short out.

DO NOT USE WITH LASER PRINTERS! The power demands of these devices will overload and possibly damage the unit.

DO NOT INSTALL THE EPS WHERE IT WOULD BE EXPOSED TO DIRECT SUNLIGHT OR NEAR HEAT!

DO NOT BLOCK OFF VENTILATION OPENINGS IN THE EPS'S HOUSING!

DO NOT CONNECT DOMESTIC APPLIANCES SUCH AS HAIR DRYERS TO EPS OUTPUT SOCKETS.

SAFETY:
EN62040-1-1

EMI:
Conducted Emission: IEC/EN 62040-2…Category C2
Radiated Emission: IEC/EN 62040-2……Category C2
Harmonic Current: IEC/EN61000-3-2
Voltage Fluctuations and Flicker: IEC/EN61000-3-3

EMS:
IEC/EN61000-4-2(ESD)
IEC/EN61000-4-3(RS)
IEC/EN61000-4-4(EFT)
IEC/EN61000-4-5(lightning surge)
IEC/EN61000-4-6(CS)
IEC/EN61000-4-8(Magnetic)
IEC/EN61000-2-2 (Immunity to low frequency signals)
UNPACKING
Inspect the EPS upon receipt. The box should contain the following:
EPS unit x1; Installation Guide x1; User manual x1; Battery Wiring Arrangement manual x1;

AUTOMATIC VOLTAGE REGULATOR
When utility power is inconsistent, the EPS would increase low voltage or decrease high voltage to safe 220 volts. The EPS automatically provides battery backup (External battery connection required) if the voltage drops below 140 volts or exceeds 300 volts.

HARDWARE INSTALLATION GUIDE
1. Your new EPS may be used immediately upon receipt. However, recharging the external battery for at least 8 hours is recommended to ensure that the battery’s maximum charge capacity is achieved (Charging time varies with capacity and a 100Ah or great battery is recommended). To recharge the external battery, simply leave the unit plugged into an AC outlet. Your EPS is equipped with an auto-charge feature. When the EPS is plugged into an AC outlet, the external battery will automatically recharge. The unit will charge in both the ON and OFF positions.

2. DO NOT plug a laser printer, paper shredder, copier, space heater, vacuum or other large electrical device into the EPS. The power demand of these devices may overload and damage the unit. DO NOT use with medical or life support equipment. DO NOT use with or near aquariums as condensation may cause the unit to short.

3. After connecting the hard wires, plug the EPS into a 2 pole, 3 wire grounded receptacle (wall outlet). Make sure the wall branch outlet is protected by a fuse or circuit breaker and does not service equipment with large electrical demands (e.g. refrigerator, copier, etc…). The warranty prohibits the use of extension cords, outlet strips, and surge strips.

4. Press the power switch to turn the unit on. The power on indicator light will illuminate and the unit will beep once.

5. If an overload is detected, an audible alarm will sound and the unit will emit one long beep. To correct this, turn the EPS off and unplug at least one piece of equipment from the battery power supplied outlets. Wait 10 seconds. Make sure the circuit breaker is depressed and then turn the EPS on.

6. To maintain optimum battery charge performance, make the EPS plugged into an AC outlet at all times. Enabling the switch provides the bypass for charge only.
**DESCRIPTION**

1. **AC Outlets**
   EPS PRO/PIE Series have two general plug-in outlets (UK/Schuko/ France) and one terminal outlet for connected equipment which ensures temporary uninterrupted operation of the equipment during a power failure. Max. Output of 1a is 40A; Max. Output of 1b is 12A for UK socket, 16A for Schuko/France socket. Max. Output wattage of (1a+1b) is 2450W (CPS3500PIE/CPS3500PRO/CPS3500STD Series)/ 3500W (CPS5000PIE/CPS5000PRO/CPS5000STD Series).

   *Note:* Maximum cord length is 10 meters and the cable O.D. must be 10AWG (CPS3500PIE/CPS3500PRO/CPS3500STD & CPS5000PIE/CPS5000PRO/CPS5000STD Series) or greater.

2. **AC Inlet**
   AC input terminals

   *Note:* The O.D. of the distribution cables must be 10AWG (CPS3500PIE/CPS3500PRO/CPS3500STD & CPS5000PIE/CPS5000PRO/CPS5000STD) or greater.

3. **DC Inlet**
   Battery input terminals

   *Note:* Maximum battery wiring cable length is 2 meters and the cable O.D. must be 4AWG or greater.

4. **DC Circuit Breaker**
   Located on the side of the EPS, the circuit breaker serves to provide overload and fault protection.

5. **AC Output Circuit Breaker**
   Located on the side of the EPS, the circuit breaker serves to provide overload and fault protection.
6. **AC Input Circuit Breaker**
Located on the side of the EPS, the circuit breaker serves to provide overload and fault protection.

7. **Battery Input Wiring Fault LED**
Battery input wiring fault LED will illuminate and make an audible alarm to indicate the wiring polarity is reversed.

8. **Output Selector**
Output Selector provides four most common operation situations for switch include Normal, Bypass with AVR, Bypass, Off. No matter under what situations, the charger would keep charging external batteries if utility power is still alive.

- **Normal**: The unit will provide all functions of uninterruptible power supply include charger.
- **Bypass with AVR**: The unit will bypass the utility power with voltage regulator and shutdown the unit when the utility power exceed 300Vac or below 140Vac.
- **Bypass**: The unit will bypass the utility power to output directly.
  - **Note**: Bypass model wouldn’t provide any overvoltage protection. Utility power may damage equipments plugged to EPS, make sure equipment safe before switch to this model.
- **Off**: The unit will interrupt all outlets power output.
  - **Note**: The charger would still work under these four switch modes.

*For PIE and STD Series, the unit provides specific Bypass function.*
Bypass: The switch provides the bypass for charge only and shutdown the unit when the utility power exceeds 300Vac or below 140Vac. In charger only mode, AVR and battery backup will not work.

9. **Power Switch**
Used as the master on/off switch for equipment connected to the battery power supplied outlets.

10. **Power On Indicator**
This LED is above the power switch. It illuminates when the utility condition is normal and the EPS outlets are providing power, free of surges and spikes.

11. **LCD Display Toggle / Selected Switch**
Users can monitor EPS status and set up functions using the toggle.

12. **Multifunction LCD Readout**
High resolution and intelligent LCD display shows all the EPS information with icons and messages. For more information please check the DEFINITIONS FOR ILLUMINATED LCD INDICATORS section.

13. **SNMP/DB9/USB Network slot**
Remove the cover panel to install optional SNMP/DB9/USB CARD that allows remote monitoring and control of your UPS through network or cable.
  - **Note**: This function only provide on PRO Series.
**INSTALLATION GUIDE**

Note: The installation must be done by professionals.

1. Remove the cover from the back of the machine.

2. Make sure the POWER SW, Output Selector, and the BATTERY SW. are turned off. (Step1)

3. Connect the AC OUTPUT connections (AC plugs or terminal connections). (Step2)

4. Connect the AC power source to AC INPUT (Make sure AC power is off first). (Step3)

---

EPS will not function if the Output Selector is OFF. Make sure the Selector on Normal position after all installation procedures.

---

Copyright © 2009 CyberPower Systems, Inc.
5. Connect the batteries to the BATTERY INPUT. (Step 4)

⚠️ WIRING FAULT LED will illuminate and make an audible alarm to indicate the wiring polarity is reversed.

6. If the battery box or the battery connection has a switch, please turn it on first.

7. Turn on the BATTERY SW. on the back of the machine (Step 5)

8. Turn on the Power Switch and switch the Output Selector to Normal on the front panel. The Power On indicator and the LCD Module Display will blink 4 times. Press the Display toggle (Selected Switch) once. The output voltage showing on the LCD Module Display should be 220V. This completes the start-up process. (Step 6)

9. Press and hold the Display toggle switch for 4 seconds then release. The machine will begin a self test and enter Battery Mode for 6 seconds before returning to Line Mode. Make sure the self test is ready, or see the Definitions for illuminated LCD on page 10 for a list of alarm code definitions.

10. After ensuring the machine works normally, reassemble the back cover. The installation is now complete.

11. When the external battery needs to be maintained or replaced remember to turn the machine off. Once off, remove the AC power source and switch off the BATTERY SW. before maintenance or replacing the batteries. When the work is complete, please start from Step 1 to re-install the machine.
REPLACING THE BATTERY

CAUTION! Read and follow the IMPORTANT SAFETY INSTRUCTIONS before servicing the battery. Battery service should only be done by qualified professionals.

CAUTION! Use only the specified type and number of external batteries. Please see the technical specifications for replacement batteries.

CAUTION! The battery may present a risk of electrical shock. Do not dispose of battery in a fire as it may explode. Follow all local ordinances regarding proper disposal of batteries. Lead-acid batteries should be recycled.

CAUTION! Do not open or mutilate the batteries. Released electrolyte is harmful to skin and eyes and may be toxic.

CAUTION! The external battery cabinet must be provided with 100A x2/ 80V for models CPS3500PIE, CPS3500PRO, CPS3500STD, CPS5000PIE, CPS5000PRO and CPS5000STD of DC protective device.

CPS3500PIE Series include CPS3500PIE, CPS3500PIE-FR, CPS3500PIE-UK and other versions.
CPS3500PRO Series include CPS3500PRO, CPS3500PRO-FR, CPS3500PRO-UK and other versions.
CPS3500STD Series include CPS3500STD, CPS3500STD-FR, CPS3500STD-UK and other versions.

CPS5000PIE Series include CPS5000PIE, CPS5000PIE-FR, CPS5000PIE-UK and other versions.
CPS5000PRO Series include CPS5000PRO, CPS5000PRO-FR, CPS5000PRO-UK and other versions.
CPS5000STD Series include CPS5000STD, CPS5000STD-FR, CPS5000STD-UK and other versions.

CAUTION! A battery can present a high risk of short circuit current and electrical shock.

Take the following precautions before replacing the battery:

1. Remove all watches, rings or other metal objects.

2. Only use tools with insulated handles.

3. Do not lay tools or metal parts on top of battery or any terminals.

4. Wear rubber gloves and boots.

5. Determine if the external battery is inadvertently grounded. If grounded, remove the source of ground. CONTACT WITH GROUNDED BATTERY CAN RESULT IN ELECTRICAL SHOCK!
DEFINITIONS FOR ILLUMINATED LCD

The LCD Display indicates a variety of EPS operational conditions. All descriptions apply when the EPS is plugged into an AC outlet and turned on or when the EPS is on battery.

1. INPUT VOLTAGE Meter: This meter measures the AC voltage that the EPS is receiving from the utility wall outlet. The EPS is designed, through the use of automatic voltage regulation, to continuously supply connected equipment with stable, 220 output voltages. In the event of a complete power loss, severe brownout or over-voltage the EPS will rely on its external battery to supply consistent 220 output voltage. The Input Voltage Meter can be used as a diagnostic tool to identify poor quality input power.

2. OUTPUT VOLTAGE Meter: This meter measures the AC voltage that the EPS is providing to the equipments. It displays normal line mode, AVR mode, and battery backup mode.

3. ESTIMATE RUN TIME: This displays the run time estimate of the EPS. Once the run time becomes shorter and the current battery capacity would decrease. (You can see the BATT. Bar chart keeps falling) Note! This function of specified models cannot work.

4. NORMAL MODE Icon: This icon will illuminate when the EPS is working under normal conditions.

5. ON BAT (On Battery) Icon: During a severe brownout or blackout, this icon illuminates and an alarm sounds (2 short beeps followed by a pause) to indicate the EPS is operating from its external batteries. During a prolonged brownout or blackout, the alarm will sound continuously. When the BATTERY CAPACITY Meter shows one 20% capacity segment remaining it indicates the EPS’s external batteries are nearly out of power. You should save files and shut down your equipment immediately.

6. AVR (Automatic Voltage Regulator) Icon: This icon will illuminate whenever your EPS is automatically correcting high or low AC line voltage. This is a normal, automatic operation of your EPS, and no action is required on your part.

7. SILENT MODE Icon: This icon illuminates whenever the EPS is in silent mode. The buzzer will not beep during the battery mode until the battery reaches low capacity.

8. OVER LOAD Icon: This icon will illuminate and an alarm will sound to indicate the battery supplied outlets are overloaded. To clear the overload, unplug some of your equipment from the battery supplied outlets until the icon is no longer illuminated and the alarm stops.

9. FAULT MODE Icon: This icon illuminates if there is a problem with the EPS. Please contact
10. **BATTERY CAPACITY Meter**: This meter displays the approximate charge level (in 20% increments) of the EPS's external battery. During a blackout or severe brownout, the EPS will switch to battery power, the ON BAT icon will be illuminated, and the charge level will decrease.

11. **LOAD CAPACITY Meter**: This meter displays the approximate output load level (in 20% increments) of the EPS's battery outlets.

---

**EPS Status Inquiry and Functions Setup**

1. **General Mode**
   a. Press the “Display” button to check the status of the EPS.

<table>
<thead>
<tr>
<th>Item</th>
<th>Unit</th>
</tr>
</thead>
<tbody>
<tr>
<td>Input Voltage</td>
<td>V</td>
</tr>
<tr>
<td>Output Voltage</td>
<td>V</td>

<td>°C</td>
</tr>
<tr>
<td>Fahrenheit</td>
<td>°F</td>
</tr>
</tbody>
</table>

   b. Press and hold the **Display** toggle for 4 seconds.

   - If the machine is in the Battery Mode, it enters the status of Mute.
   - If the machine is in the Line Mode, it proceeds to Self Test.

   c. If the **Display** toggle remains untouched for over 30 seconds, the LCD backlight will turn off automatically.

2. **Set-up Mode**

   **Step 1**: The machine enters Set-Up Mode after holding the Display toggle for 10 seconds. Icon 4,5,6,7,8,9 lights indicate that Set-Up Mode.

   **Step 2**: By pressing the Display toggle, users can switch between setup functions. User configurable functions are as follows:

   a. **Delay Time**: The time delay between switching from Battery Mode to Line Mode. There are 9 different settings. The default setting is 2.0 minutes.

      **Function description**: The machine will switch from Battery Mode to Line Mode after the AC power transmission reaches stability within the preset delay time.

   b. **Battery AH**: The function adjusts the battery charging current according to the capacity of the connected batteries. It can be configured for 50, 100, 150 and 200AH. The default
setting is 200AH.

**Function description:** The charger will automatically adjust current to setting value.

c. Nominal Output Voltage: Configures the correct electricity/voltage supplied in the area/country where the EPS will be used. 220V, 230V and 240V may be selected. The system default setting is 220V.

**Function description:** AVR Dynamic Voltage Compensation works automatically based on the system voltage settings.

d. Static Frequency Tolerance: There are 6 settings (1,2,4,6,8,10%), and the default setting is +/-10%.

**Function description:** The settings may be adjusted to the quality of the electricity in use.

e. Slew Rate (Dynamic Frequency Tolerance): There are 5 different settings (0.25,0.5,1,2,4 Hz/Sec). The default value is 4Hz/sec.

**Function description:** “Slew Rate” indicates the tolerance of a device in accepting frequency variances. The lower “Slew Rate” results in less tolerance but better protection for the connected loads.

f. Battery Shutdown Voltage: This function adjusts the UPS shutdown point according to the battery voltage. There are 5 settings(38V,39V,40V,41V,42V) and the default setting is 40V.

g. Mode Select: There are 2 settings( Robust{1},Standard{2} ) , The robust mode and the standard mode are provided to select. Using the generators is suggested to select the robust mode, and using the computers is suggested to select the standard mode. The default setting is Robust {1}.

The settable items are sorted by unit as in the following table:

<table>
<thead>
<tr>
<th>Items</th>
<th>Unit</th>
<th>Icon Lit</th>
</tr>
</thead>
<tbody>
<tr>

<tr>
<td>Mode Select</td>
<td>None</td>
<td>None</td>
</tr>
</tbody>
</table>

**Step 3:** Press and hold the toggle for 4 seconds. When the icons blink, the value of each item can be changed by slightly pressing the toggle.

**Step 4:** To save the value and return to general mode, press and hold the toggle for 4 seconds.

**Note:** If the machine is left idle for over 30 seconds during setup, it will turn off the backlight and return to general mode automatically.

**Note:** If user wants to return to general mode without saving changes, there are two methods:

1. Wait for the backlight to turn off
2. Press and hold the “Display” toggle for 10 seconds
### FAULT WARNING DISPLAY AND ALARM

1. **Overheat Protection**: The machine shut down and the LCD display output voltage is zero.

2. **Over-Load Protection**: The machine shut down and Over Load and FAULT Icon lights on the LCD display.

3. **Battery Missing**: The machine sounds long and rapid beep and Battery icon flashes.

4. The following table shows each corresponding warning message on the LCD display and the alarm reacts during the machine shut down:

### AC Input
- Input Voltage Range: 140Vac – 300Vac
- Input Frequency Range: 50/60 Hz +/- 5 Hz (auto sensing)

### AC Output
- Phase: Single Phase
- On Battery Typical Output Voltage: Pure Sine Wave at 220Vac +/- 5%
- Nominal Output Voltage: Configurable for 220 : 230 : 240Vac
- Battery Output Frequency: 50 / 60 Hz +/- 1%
- Transfer Time: < 10 ms (Typical)
- Output Receptacles: UK Type *2 + Terminal Block, Note! Schuko * 2 + Terminal Block (for Germany type)

### External Battery
- Voltage x Recommended Rating X Quantity: 12V x 200Ah X 2, 12V x 200Ah X 4
- External Battery Voltage: 24V, 48V
- External Battery Type: Sealed Maintenance Free Lead Acid Battery
- External Battery Protection: DC Circuit Breaker
- Hot Swappable: Yes
- Extended Runtime: Yes, NO, Yes, NO

### Status Indication
- Indicators: Power On, LCD Display
- Audible Alarms: On Battery, Low Battery, Overload

### Environmental
- Temperature: 32°F to 104°F (0°C to 40°C)
- Relative Humidity: 0 to 95% Non-Condensing

### Physical
- Dimensions (L*W*H)(mm): 330*260*440
- Weight (Kg): 36 Kg, 34 Kg, 44 Kg, 42 Kg

### Safety
- Certificated: CE/SONCAP
